

Specially Developed to meet the requirements of EV charge points with data connectivity

Available in both CarbonTek® PVC Tuff-Sheathed or CarbonTek® SWA variants.

**Conductor:** Plain Annealed Copper Class 2 Stranded to BS EN 60228

**Insulation:** Thermosetting XLPE Type GP8 to BS 7655-1.3

**Bedding:** CarbonTek®

**Steel Wire Armour:** Galvanised steel wire armour (where applicable)

**Sheathing:** CarbonTek®

**Energy Monitor Cable:** 2 core screened energy monitor cable

**Now using  
CARBONTEK®**

### Manufactured in the UK

This cable is designed for use in the installation of electric vehicle charge points. The cable incorporates power conductors and a 2 core screened data cable, encapsulated in a double sheathed design for extra protection. Whilst designed for use in electric vehicle charge points, the cable is also suitable for other installations where power and a 2 core data/signal cable is required.

These cables are designed to be installed in air, clipped to surface, on cable tray/ladder work and embedded in concrete. The cables can be laid direct in the ground providing that suitable mechanical protection is in place.

#### STANDARD CORE COLOURS

3 core

Specially Developed to meet the requirements of EV charge points with data connectivity

### Dimensional Details:

| Product Code     | Nominal CSA of conductors     | Nominal stranding of conductor | Nominal radial thickness of insulation | Nominal overall diameter of bedding | Galv. Steel Wire Armour | Nominal radial thickness of sheath | Approx. overall diameter | Approx. weight |
|------------------|-------------------------------|--------------------------------|--|-------------------------------------|-------------------------|------------------------------------|--------------------------|----------------|
| EV-ULTRA3C4.0    | 3 x 4.0mm <sup>2</sup> + DATA | 7 / 0.85mm                     | 0.7mm                                  | 11.0mm                              | N/A                     | 1.0mm                              | 13.6mm                   | 265kg/km       |
| EV-ULTRA3C4.0SWA | 3 x 4.0mm <sup>2</sup> + DATA | 7/0.85mm                       | 0.7mm                                  | 11.0mm                              | 0.9mm                   | 1.0mm                              | 15.0mm                   | 480kg/km       |
| EV-ULTRA3C6.0    | 3 x 6.0mm <sup>2</sup> + DATA | 7/1.04mm                       | 0.7mm                                  | 12.0mm                              | N/A                     | 1.0mm                              | 14.4mm                   | 350kg/km       |
| EV-ULTRA3C6.0SWA | 3 x 6.0mm <sup>2</sup> + DATA | 7/1.04mm                       | 0.7mm                                  | 12.0mm                              | 1.25mm                  | 1.0mm                              | 16.8mm                   | 625kg/km       |

### Electrical Properties:

|                            | 4.0mm <sup>2</sup> | 6.0mm <sup>2</sup> |
|----------------------------|--------------------|--------------------|
| Maximum current rating (A) | 45                 | 58                 |
| Voltage drop (mV/A/m)      | 12                 | 7.9                |

Weight and dimensional information is provided as an approximate guide only.

Current carrying capacities based on ambient temperature of 30°C and conductor operating temperature of 90°C.  
Refer to BS7671 for further details including grouping factors and ambient temperatures other than 30°C

### Features and Benefits

- Power and data combined in one cable
- Less storage space required
- Easier to handle
- Easier to route through walls and buildings
- Saves installation time
- Gives a cleaner, neater looking installation

Specially Developed to meet the requirements of EV charge points with data connectivity

Running data and power in a single cable is a concern for many electricians, with most believing that segregation of power (Band II) and data (Band I) is always required.

It is however already common to find power and data inside one cable in many existing applications, an example is DALI networks which incorporate data within a 5 core power cable.

### **What do the regulations say?**

**Voltage Band I** is defined as levels of voltage which are too low to provide serious electric shocks; effectively this limits the band to extra-low voltage (ELV), including telecommunications, signalling, bell, control and alarm circuits.

**Voltage Band II** is defined as all voltages which are used in electrical installations not included in Band I. This means that all 230V supplies are included in Band II.

**Proximity of electrical services** (*extract from 528.1*) - *Except where one of the following methods is adopted, neither a Band I nor a Band II circuit shall be contained in the same wiring system as a circuit of nominal voltage exceeding that of low voltage, and a Band I circuit shall not be contained in the same wiring system as a Band II circuit. (i) - Every cable or conductor is insulated for the highest voltage present.*

EV-Ultra® consists of power conductors and data cables that are rated to the same nominal voltage – therefore segregation of power and data is not required.

**Proximity of communications cables** (*extract from 528.2*) - *Special considerations of electrical interference, both electromagnetic and electrostatic, may apply to telecommunication circuits, data transfer circuits and the like.*

EV-Ultra® has been designed with these considerations in mind, it incorporates screened, twisted pair data cables and is also constructed with a lay length that reduces interference. Laboratory and on-site installation tests have also been conducted and no interference or degradation of signal was recorded.
